ABFinance

RE: ToC/ToB Developer

Dear ABFinance Hiring Team,

I'm writing to apply for the Backend Engineer role at ABFinance. I've spent more than 13 years working on backend systems in areas like digital finance, crypto platforms, and high-traffic consumer products, and I'm interested in the opportunity to help build a compliant, scalable financial platform with real user impact.

At BeamNG, where I currently work as a Full Stack Engineer, I focus mainly on backend services that support large-scale, real-time systems used by users around the world. I'm responsible for designing and owning core service modules, working closely with product teams, and making sure systems stay stable as usage grows. This includes performance tuning, deployment, monitoring, and handling production issues when they arise.

Before that, I worked at SpaceFi for several years, building backend systems and smart contracts for DeFi products such as DEXs, yield features, and user-facing platforms on Layer-2 networks. I also have earlier experience working on the backend of a crypto exchange, where reliability, security, and operational discipline were critical. These roles gave me solid experience with high-concurrency systems, low-latency services, and fast iteration in production environments.

I primarily work with Go, along with JavaScript and Python, and I've used MySQL, Redis, and message-based systems in distributed setups. I enjoy building systems that support user growth features like campaigns, rewards, referrals, and operational tooling, and I like working in a data-driven way where backend decisions directly affect user engagement and business metrics.

What draws me to ABFinance is the mix of technical challenges, product focus, and global reach. I'm comfortable working closely with product and operations teams, taking ownership of complex systems, and helping platforms scale in a responsible and sustainable way. I'm fluent in English, can communicate in Mandarin, and have experience working with remote, international teams.

I'd be happy to discuss how my background and experience could be a good fit for ABFinance. Thank you for your time and consideration.

Sincerely,  
Jinge JIN
