ProLiant Inc.

RE: Dev-Ops Engineer

Dear ProLiant Inc. Hiring Team,

I'm excited to apply for the Dev-Ops Engineer role at ProLiant. With over eight years of experience building, automating, and supporting reliable infrastructure and delivery pipelines, I enjoy solving real business problems and helping teams ship high-quality software that people can trust.

I've worked extensively with both Linux and Windows environments, supporting production systems using IIS, Windows services, scheduled tasks, and Linux-based services. My background includes designing and maintaining CI/CD pipelines with Jenkins and Bitbucket, managing core services like RabbitMQ, Elasticsearch, Kibana, Redis, and supporting containerized workloads with Docker alongside virtualized environments using VMware.

I'm comfortable automating repetitive tasks using PowerShell, Bash, and scripting tools, and I take security seriously—implementing encryption, access controls, firewalls, and monitoring as part of everyday operations, not an afterthought. I also have hands-on experience troubleshooting complex issues using system logs, application logs, IIS logs, and monitoring tools, ensuring systems stay stable and performant.

What attracts me to ProLiant is your people-first mindset and focus on building technology that truly supports businesses and their employees. I enjoy collaborating across teams, taking ownership of systems, and continuously improving reliability, scalability, and delivery speed.

I'd love the opportunity to contribute my DevOps experience and grow with a team that values quality, learning, and community. Thank you for your time and consideration.

Sincerely,  
Thomas Ford
