Apetan Consulting

RE: Software Engineer / Developer

Dear Apetan Consulting Hiring Team,

I'm excited to apply for the Software Engineer / Developer role. With over eight years of experience building backend systems, APIs, and cloud-based applications, I bring a strong focus on clean code, scalable design, and practical problem-solving.

I've designed and developed backend services using Python and Java, working with SQL and NoSQL databases and contributing to microservices-based systems. I actively participate in code reviews, testing, and debugging to ensure quality and reliability across the stack.

I work comfortably across the full development lifecycle, collaborating with product, design, QA, and DevOps teams in Agile environments. My experience with AWS, GCP, CI/CD pipelines, and DevOps best practices helps me deliver software that's production-ready and maintainable.

What attracts me to this role is the opportunity to build well-designed software in a remote, collaborative environment that values quality and continuous learning. I'd welcome the chance to contribute my experience to Apetan Consulting.

Thank you for your time and consideration.

Sincerely,  
Thomas Ford
