Sensiple Inc.

RE: Lead DevOps Engineer – Google Cloud Platform

Dear Sensiple Inc. Hiring Team,

I'm excited to apply for the Lead DevOps Engineer – Google Cloud Platform position. With over eight years of experience designing, automating, and operating cloud infrastructure in production environments, I bring strong expertise in cloud platforms, DevOps best practices, and infrastructure automation that aligns well with this role.

In my recent role at Vieaura, I built and maintained CI/CD pipelines, automated cloud provisioning using Terraform, and managed Kubernetes environments to support scalable and secure applications. I've worked across GCP and AWS environments, embedding automation, security, and observability into every stage of the delivery lifecycle. I enjoy optimizing pipelines, reducing manual effort through scripting, and ensuring systems remain reliable and performant.

I have hands-on experience with Docker, Kubernetes, infrastructure-as-code, and cloud security best practices, along with strong automation skills using Python and Bash. I work closely with engineering, QA, and product teams to ensure infrastructure supports rapid development while maintaining operational stability. Troubleshooting complex distributed systems and improving observability are areas where I add consistent value.

What attracts me to Sensiple is the opportunity to lead cloud infrastructure efforts, drive automation initiatives, and contribute to secure, resilient production systems. I'm particularly drawn to teams that value engineering quality, collaboration, and well-designed automation.

Thank you for your time and consideration. I'd welcome the opportunity to discuss how my experience can support Sensiple's goals.

Sincerely,  
Thomas Ford
